**Achieved results: Ex. Knowledge of the morphology of Baeza city in the Renaissance in order to obtain citizen heritage awareness. Citizen participation in Allariz in municipal initiatives.**

I During the work of the seminar, a systematic and extensive presentation of the essential methodology took place, regarding not only the recording-evaluation but also the intervention-protection in settlements and individual buildings with distinctive historical and cultural interest. The development of the historical establishments and the processes that shaped the course and their final form became a particular matter of examination. The study of development for those settlements includes all time periods and faces as field of research not only their initial cores, but also all later interventions and all the following phases of extension of urban space. They were also examined the general principles for the maintenance and re-establishment of settlements, the changes in the philosophy of approach, the modern practices and tools with specific examples, and the protection of the natural and cultural inheritance in the frames of a viable growth. To achieve this, presentations of studies of characteristic cases were made. The presentation and examination of individual works, helped in order to export conclusions for the development and the viable maintenance of historical settlements and individual buildings, based not only in their individual resultant needs but in a more general frame.

***Foreseen Effects. Ex. People awareness of the heritage and positive repercussion in the conservation of the historic city.***

The monuments of culture impress the diachronic history of place and rescue for the modern societies models of growth, which constitute important deposit for their cultural but also economic growth.

The urban renewal could through the growth of action of active protection ensure and contribute in a interception of course to this gloomy future, if exists the comprehension of on the one hand importance of this past for the maintenance of his material evidences of hence also the historical memory of place and not only.

Through the program we tried to appear him and to sensitise the world for their maintenance

Recording of proposals, results and printing of book

***Continuity expectations***

Expected results from the program is the strength and the the growth in the maintained at the European Historical Centres small and medium size via incorporated interventions of urban renewal and recuperation of cultural heritage. Energies that aim in the improvement of natural possibility of access and mobility of persons and goods, processes that will achieve the friendly to the citizen use of new technologies and the benefit of advanced services of information to the residents and the visitors of historical centres. Essential conditions for the achievement of mentioned before results are the protection of characteristics and particular roles of historical centres that their diversity represents a model of European life, but also in the productivity and the enterprise, in the exchange, and social, cultural and political relations. Also certain of the contribution and the usefulness of architectural expected results are: Social and economic factors in monuments of past in the world today, Re-establishment and appointment of combination the monumental heritage, Urban reformation of historical monuments: Examples of successful programs, centres of cities through the re-establishment of newer monuments and modern growth of cities and problems of maintenancepreservable buildings, Environmental conditions of historical monuments and groups of buildings, problems in the built-up areas of historical value and interest.

***Link up with the transversal European policies: Gender, environment, sustainable policy, etc.***

The transfer of Know - how, the specialisation via seminars of technicians- technical companies - public managers strengthens the growth of cities with historical centres and aspires the economic growth. The connection with applied European policies is given after that all project activities which took place in the program PAGUS have relation to sunustainable policy - viability of historical centres and also commected with other policies by projects that they are completed or materialising now in those areas.

***Others data that could illustrate the partner activities as: Number of hours of work, description of technical and administrative visits, beneficiary of new devices and any others remarks that the partner consider necessary to phrase.***

In the frames of concretisation of program we collaborated with the department of Architects and Engineers of Democritus University of Thrace as with the Ministry of Culture for the better achievement of objectives of the aseminars and for the program. Also with external Architect who is activated in the sector of restoration and works in buildings in the old city of Xanthi.

We visited buildings of our city realising their direct need of restoration, electing their rich historical importance.

We participated in EMAS seminar in Perugia ( Alta Scuola) also we organize the EMAS seminar in Xanthi with Alta Scuola with the participation of experts of technical services of municipality of Xanthi from Perfecture and from the University of Democritus.

Also we organize seminar in Xanthi with subject "The past in the future ".
